

TO Valued Customers

Thank you very much for the continued business with us.

Today, we are pleased to announce that we will be participating in JIMTOF2022 "The 31st Japan International Machine Tool Fair", taking place at Tokyo Big Sight from Nov.8th to 13th, 2022.

This year, we will exhibit "CLP-35DDSF", "CLP-45DDS" and "High-Precision Spindle Equipment" and demonstrate special measurements with these machines.

To visit this show, you are kindly asked to register online with the enclosed enrollment form in advance. We look forward to seeing you at our booth.

Sincerely yours

Exhibited Products

We will introduce the new features of our advanced CLP-35DDSF.

- A stylus changer has been installed, enabling continuous measurement of gears and geometrical deviation.
- It is now possible to correspond to closed-loop system, in which a gear measuring machine and a gear grinding machine are connected in a network, and measuring results are automatically fed back to the grinding machine for correction.
- The bar code reader is now available to read gear specifications from 2D barcodes.

CLP-45DDS demonstrates automated measurement using a scalar robot.

We propose a gear measuring system for automation of production processes and labor saving.

Non-contact measurement using a laser displacement sensor is also demonstrated. (Reference exhibition)

Rotational accuracy of high-precision spindle unit for CLP are visualized.

Here we demonstrate our processing and assembly technologies developed for the CLP series and our commitment to quality.
